

IISRP's 48th Annual General Meeting Hyatt Regency, New Delhi

THE ROLE OF TPES IN THE FLEXIBLE POLYMER INDUSTRY

PR 837
Dec 12, 2005
Greif
1/48

Dr. Balaji B. Singh

Chemical Market Resources, Inc. Houston, TX

Mr. Joaquin Gay

Dynasol, Houston, TX

Presentation Outline

Introduction

Flexible Polymers – Definitions

Flexible Polymers – Families – End Uses

Role of TPEs in Flexible Polymers

Future Direction

Conclusions & Remarks

**PR 837

Flexible Polymer Industry - Current Situation

◆ External Factors

- ◆ General Slowdown in Advanced Countries
- ◆ Growth in China, India and the South East Asia
- ◆ Commodity polymers moving to Middle East
- ◆ Global Product Migration Trends

◆ Internal Factors

- ◆ Lower Utilization
- ◆ Feed stock Cost Positioning
- ◆ New Innovations on Hold

Global Demand for Flexible Materials, 2001

PR 837
 Dec 12, 2005
 Greif
 9/48

Total Demand of Flexible Polymers, 2001 = 76 Billion Lbs

Global Demand for Flexible Materials, 2001

PR 837
 Dec 12, 2005
 Greif
 10/48

Total Value of flexible materials, 2001 = 40.2 Bn\$

Global Market for Flexible Materials, by Region

PR 837
Dec 12, 2005
Greif
11/48

Total Demand of flexible materials, 2001 = 76,227 MM Lbs

The Role of TPEs?

Develop Products that will behave like Thermoset Rubbers using the Thermoplastic Processing methods

Benefits

- **Recyclability**
- **Less Need for Rubber Compounding**
- **Cost Savings due to Thermoplastic Processing**
- **Opportunities for Thermoplastic Compounders**

Total Value of flexible materials, 2001 = \$40,245 MM

The Role of TPEs? –

History

Prior 1980s

SB Copolymers – The Shell Game!
TPOs – Compounder Domain
Specialties – DuPont Innovation Cycle

1980s

- ◆ SB Copolymers' coming of Age
- ◆ TPVs – Monsanto Movement
- ◆ DuPont's MPRs - First Life Cycle
- ◆ RTPOs – Himont, DSM and others
- ◆ Realization that Compounders are Indispensable

PR 837

Greif
15/48

The Role of TPEs? –

History

1990s

- ◆ SB Copolymers – Transition to commodities
- ◆ TPOs – Boost From Automotive
- ◆ Specialties – Status quo and Reorganization
- ◆ New Technologies – Status quo

PR 837
Dec 12, 2005
Greif
16/48

The Attention of TPEs was Diverted to
“Metallocenes” and Olefinic Elastomers
“Flexible PVC Opportunities”

The Role of TPEs – Current

◆ Continue to Bridge the gap between Thermosets and Thermoplastics

◆ Continue to Bridge the gap between reactor operations and compounding functions

◆ Focus on automotive and synergistic opportunities in others

PR 837
Dec 12, 2005
Greif
17/48

◆ Impact of metallocenes and other polymerization technologies

◆ Watching Flexible PVC

The Three Criteria

- *Specialty Index*
- *Market Attractiveness*
- *Required Business Position*

Specialty Index

Specialty index is defined as the combination of the following major attributes and the associated weights:

Profitability	40%
Demand	20%
Number of Players	15%
Price	15%
Technical Barriers	10%
	100%

PR 837
Dec 12, 2005
Greif
19/48

Market Attractiveness

Market Attractiveness is defined as the combination of the following major attributes and the associated weights:

Market Size	30%
Market Value	30%
Growth Rate	30%
End Users	10%
	100%

PR 837
Dec 12, 2005
Greif
20/48

Required Business Position

Required Business Position expresses quantitatively the difficulty of entering and staying in the market. It is a combination of the following major attributes and the associated weights:

Patent/Technology	40%
Technical/Sales Effort	25%
Low Cost Supplier	15%
Synergy	20%
	100%

TPOs

High Volume Specialties

- ◆ **Purpose** : Providing an alternative to post-reactor processing
- ◆ **Function**: Impact properties
- ◆ **The value addition** is partly at the producer level – overall cost reduction is the key
- ◆ **The end users** have to optimize the shifting values – between producers and compounders
- ◆ **Enablers** - Technology and market understanding
- ◆ **Long Term Threat** – Cost Economics

PR 837
Dec 12, 2005
Greif
26/48

Chemical Market Resources Inc.
CMR
Houston, TX (281) 557-3320

SB Copolymers High Volume Specialties

- ◆ **Purpose:** The first commercial TPE
- ◆ **Function:** Impact and Compatibilization
- ◆ The value addition is at the producer level.
New SBs – Kraton Polymers continuing the innovation of Shell
- ◆ **Threats** - SBS commoditization with no new end uses
- ◆ **SIS** – Limited End Uses
- ◆ **SEBS** – Impact of newer polyolefins
- ◆ **Enablers:** Polymer Technology and market position

PR 837
Dec 12, 2005
Greif
27/48

Specialty TPEs

- ◆ Will remain specialties due to choice, industry structure and/or Cost/performance
- ◆ Technology and volume and market development will be the enablers

New Directions for TPEs?

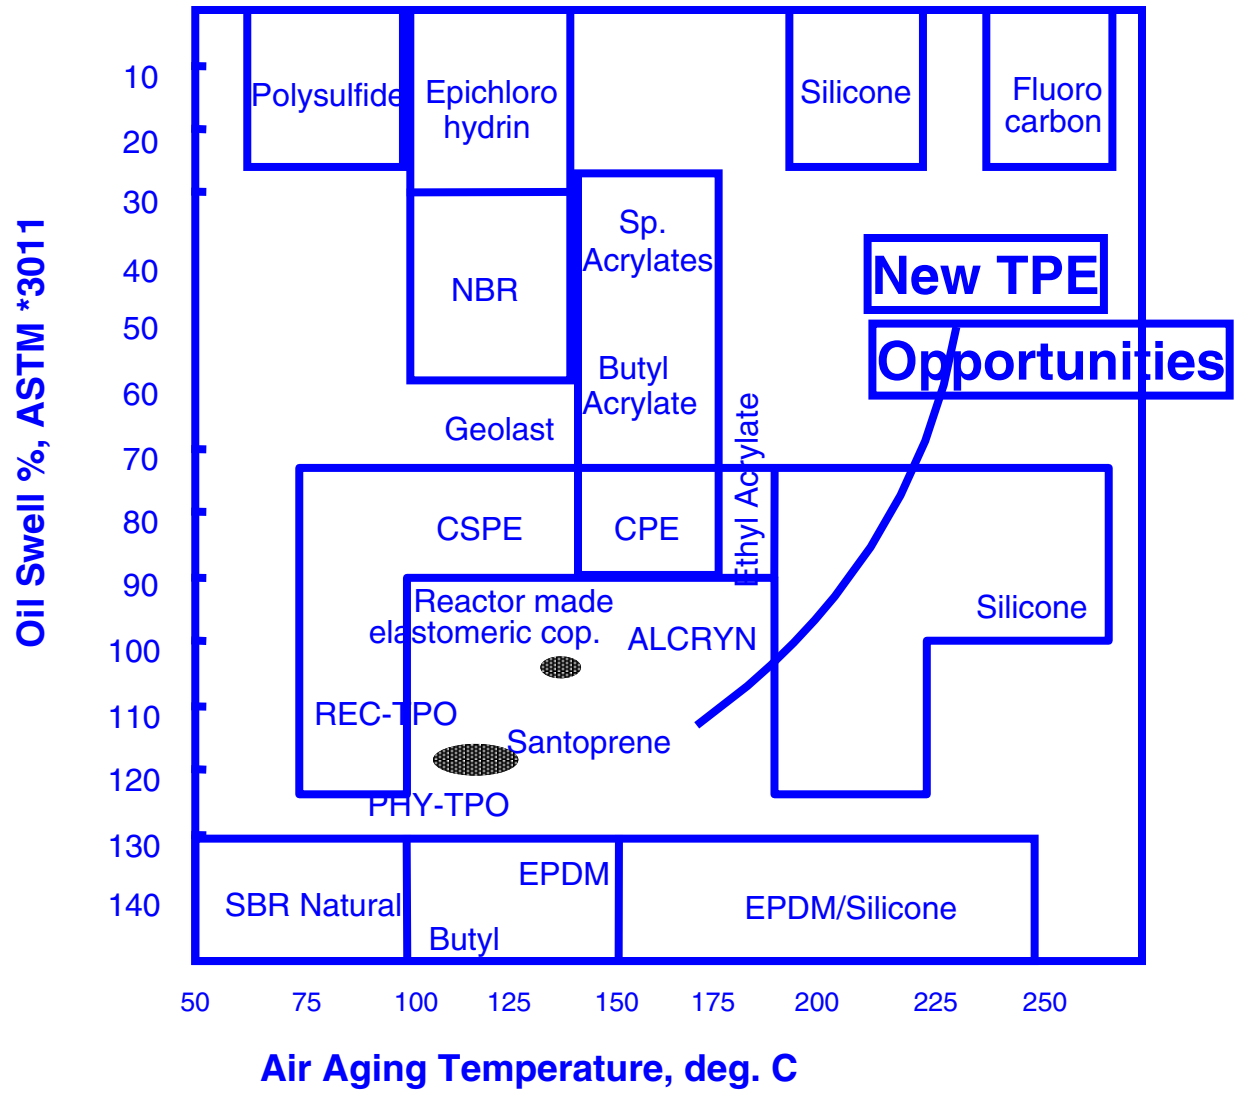

- ◆ Historically, TPEs only focused on flex modulus aspects of Thermosets, except Geolast
- ◆ The other unmet needs
 - ◆ Clarity
 - ◆ Impact
 - ◆ Chemical Resistance
 - ◆ Polarity
 - ◆ Barrier properties
- ◆ The specialty products have been focusing on these unmet needs and will continue to provide the opportunities.

PR 837

Conclusions

- ◆ *New TPE developments in the last decade have been diverted by other activities in the flexible polymer industry vis-à-vis Polyolefin Metallocenes, Industry Reorganizations, Focus on Flexible PVC...,*
- ◆ *TPEs have tremendous untapped potential in both markets and technologies. We have a long way to go...,*
